

RDT

THE RESPONSIBLE CHOICE

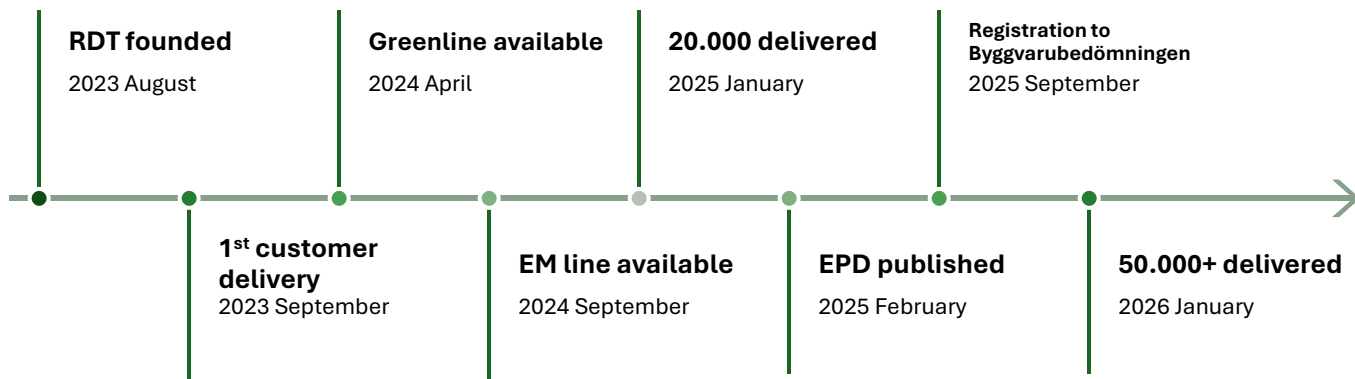

Casing Advancement Systems

Product catalog and selection guide

Who we are

At RDT, we bring a fresh perspective with a team of seasoned professionals dedicated to make your drilling even more successful. We leverage the latest in technology and a commitment to agile development helping you to fulfill all targets and environmental requirements. Now and in the future. Our unique approach includes pioneering the first ever carbon-neutral drilling products and market leading modular designing ensuring that we not only lead in innovation but also in sustainability. Join us at the forefront of progress and prosperity in drilling.

Our solutions

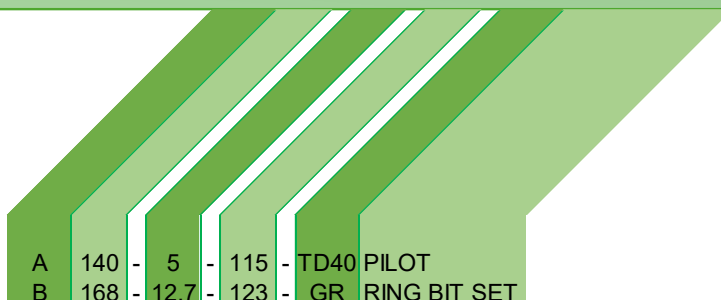

Explore our comprehensive CAS drilling solutions, tailored to meet a variety of applications where casing is essential. Whether you're delving into foundation or well drilling, erecting retaining walls, or navigating tunnel construction, our expertise ensures your projects stay on track and operations remain seamless.

From preserving hole integrity to leveraging casing strength for piling and foundation drilling, our solutions empower efficiency and productivity across the board. Let's elevate your drilling experience together. We are here to serve you.

Products, naming and the features

All RDT products are designed and manufactured in Finland with 97.5 % of the raw materials being acquired from Europe. Thus, RDT is #TheResponsibleChoice

CAS Product names

Model families

A	Thin-walled Ring bit set	All conditions where thin wall is required
B	Thick-walled Ring bit set	Basic system for all purposes with thick casing wall
T	Forepoling ring bit sets	System specifically designed for pipe roofing applications
X	Heavy-duty Ring bits	Heavy-duty model, available as ring bit sets and separate ring bits
R	Retrievable Rinb bit sets	Applications where the casing needs to be retrieved from the hole

Additional information

Pilots

Shank type for DTH
Thread type for TH
DT Drill Through
SF Sensi-Flow

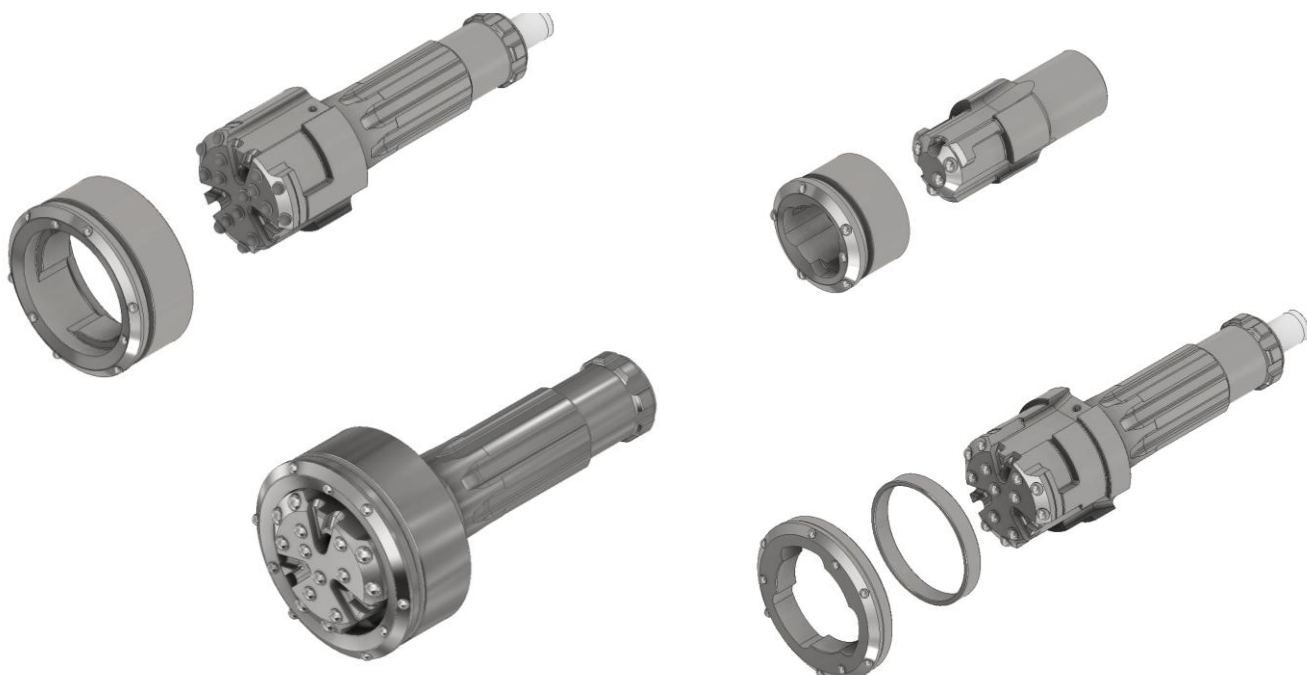

Ring bits

GR Greenline, carbon neutral product
EM EcoModel for easy conditions
HD Heavy-Duty for extreme conditions
OD Oversize ring Diameter, e.g., for RD-walls
RR Retrievable Ring set option (B or X models)
SR Separate Ring bit

Flexibility

Built-in feature

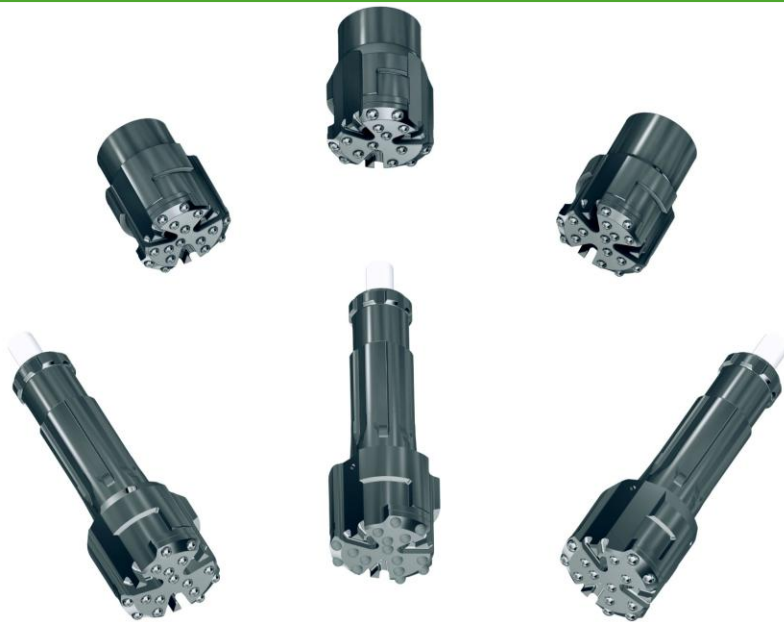

All products in the same model family are compatible together

RDT Flexibility

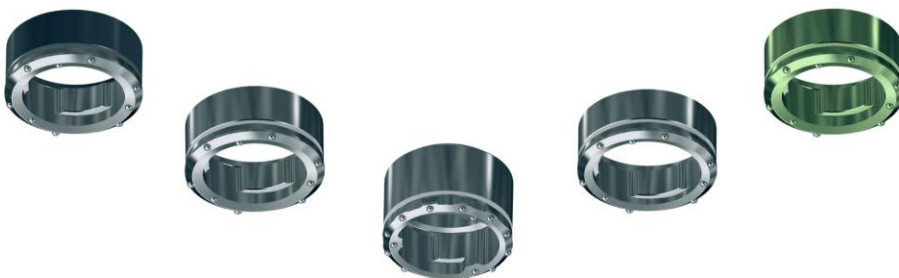

Innovative Flexibility to make your daily choices easier! Designed for ease of use and adaptability, our modular systems simplify operations and minimize inventory needs. Unique property on the market.

With #RDTflexibility there is no need to change the system. Operator can switch from a DTH to a TH pilot, or from standard pilot to a SensiFlow (SF) or to a Drill Through (DT) pilot when needed without the need to change the ring bit assembly. Or utilize the same pilot already in use with standard, GR, EM, RR, HD, OD or SR ring bit sets when needed.

RDT FLEXIBILITY

Where everything fits

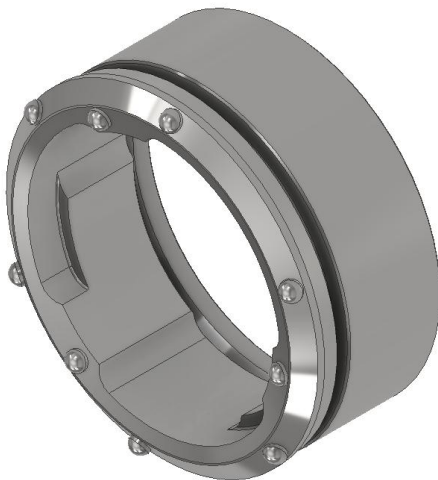

RDT EM-line

The EM-products

New EM-line covers all A and B models with the full RDT Flexibility. It is best suited to shallow and easy holes to save resources where there is no need for heavy ring set. RDT systems are designed to be fully modular. EM-line ring sets are fully compatible with standard pilot bits, so no new systems are needed. This makes your life easier by making product selection easy based on drilling site conditions.

In piling our EM versions have the same load bearing capacity as the standard ring set has. This is not always the case with many economy and light models available on the markets. In a RDT product you can always count on.

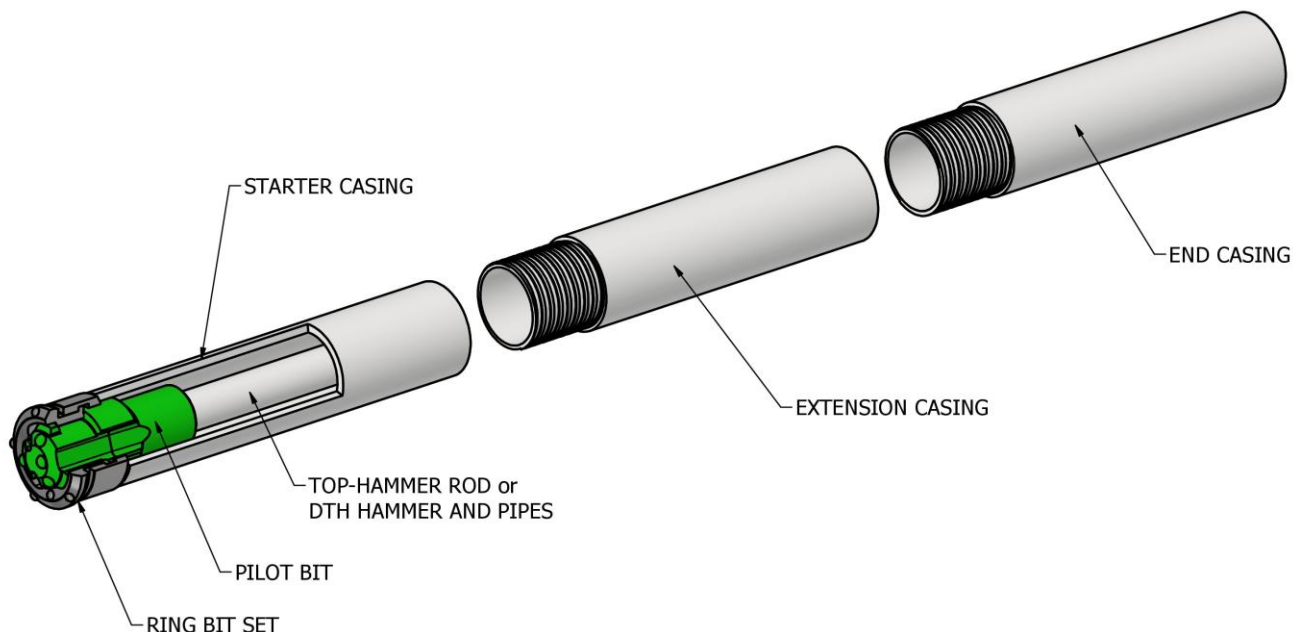

- ✓ Saves valuable natural resources
- ✓ Optimized for easy conditions and/or shallow depths
- ✓ Reduced carbide and steel volumes
- ✓ 100% RDT flexibility
- ✓ Full load bearing capacity as the standard B models
- ✓ #TheResponsibleChoice

RDT Forepoling

RDT forepoling products, both TH and DTH versions, are specialized for tunnel applications where tubes/casings are drilled to support tunnel roof and walls. It has excellent penetration to all rock and soil types, and pilot bit is easy to connect to ring bit and remove it. RDT forepoling ring sets can be also supplied as ready drillable elements, i.e., welded onto casings. Extension and end casings are also available.

On top of the tunnel roofs, Model T is also suitable for many other casing drilling works like small anchor drilling, micro piling and drainage holes. Everyplace where small diameter casings are used. From casing size 139,7 up we recommend using our B model also for forepoling applications. It is also possible to design specific tool based on customer requirements.

RDT Greenline

The GR-products

First in the world, published to the public in March 2024, in Sweden. Our Greenline products boast 97% recycled content with significantly reduced CO2 emissions, setting a new standard in environmentally responsible drilling. Our EPD was published in February 2025 and figures in the graphs presented are based on the EPD calculations.

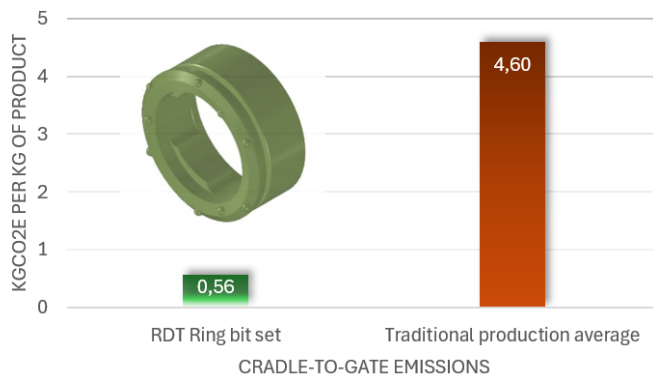

RDT Greenline product family is a pioneer on the market for the need we are facing globally. RDT Greenline aims to be completely CO2 emission free. The current level is already almost 90% less than a traditional production route produces.

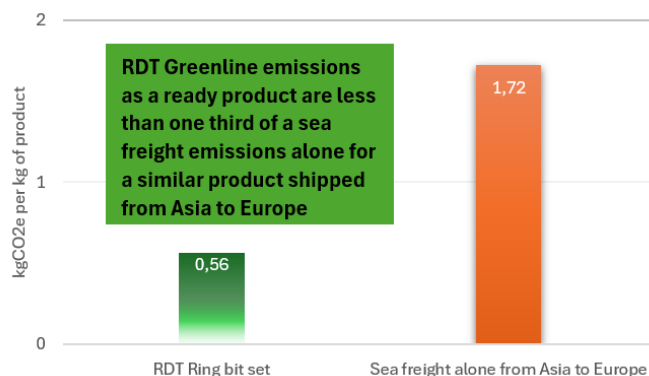

Often only CO2 emissions of a production method or raw materials are considered but emissions released during transportations can be remarkably high. Especially in overseas transportations as shown on right.

It is also noteworthy that all RDT products are made in Europe and all raw steel is sourced from European steel mills.

CO2 EMISSIONS OF A RING BIT SET

CO2 EMISSIONS OF A RING BIT SET
